Rape micr

This invention describes a novel isolated nucleic acid sequence (I) encoding a Calendula officinalis calendulic acid desaturase polypeptide. The invention also describes (I) a process for producing unsaturated fatty acids, comprising introducing at least one copy of (I) or (II) introducing organism, growing the organism, isolating oil from the

into

New nucleic acid sequence encoding Calendula officinalis calendulic acid desaturase, useful for e.g. producing transgenic plants having oil with an increased unsaturated fatty acid content,.

Claim 1b; Page 13-15; 22pp; German.

```
CC organism and releasing fatty acids from the oil;(2) a process for CC producing triglycerides with an increased unsaturated fatty acid content, CC comprising introducing at least one copy of (I) or (II) into an oil-CC producing organism, growing the organism and isolating oil from the CC organism; (3) a process for producing saturated fatty acids, comprising CC introducing at least one nonfunctional copy of (I) or (II) into an oil-CC producing organism, growing the organism, isolating oil from the organism (CC and releasing fatty acids from the oil; (4) a process for producing CC triglycerides with an increased saturated fatty acid content, comprising CC introducing at least one nonfunctional copy of (I) or (II) into an oil-CC producing organism, growing the organism and isolating oil from the CC organism; (5) an enzyme capable of converting a diumsaturated fatty acid CC of to a triunsaturated fatty acid. Transgenic organisms (especially containing one or more copies of (I) are useful for producing CC oils with an increased unsaturated fatty acid content. Transgenic CC of (I) are useful for producing Oil with an increased saturated fatty acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for producing CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) and fragments of (I) are also useful for isolating CC acid content. (I) are al
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This DNA encodes the Crepis alpina delta 12 acetylenase. This is used in the production of acetylenic compounds. The process comprises treating C18 fatty acids having a double bond at position delta 12 with an acetylenase to form 12-ynoic acids. The acetylenic compounds can be produced by organisms such as oilseed plants, yeast and fungi which are transformed with this acetylenase DNA. These organisms can accumulate these acetylenic compounds which are chemical feedstocks, particularly for coatings, plasticisers and lubricants. The process enables the production of these acetylenic compounds from a renewable resource with high purity and at reasonable cost. (Updated on 25-MAR-2003 to correct feield.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bafor M,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC This full-length cDNA clone, designated Cpal2, codes for a novel mixed CC function monoxygenase (see AAW79742) of Crepis palaestina that is CC characterised as having delta-12-epoxygenase activity. It was isolated CC from a C. palaestina cDNA library using a Crepis alpina acetylenase CC partial gene sequence (see AAW7972-54) that are characteristic of CC contains His-rich motifs (see AAW7972-54) that are characteristic of CC mixed function monoxygenases. The Cpal2 gene was shown to be highly CC expressed in developing seeds, with no expression detectable in leaves. CC The invention relates generally to novel genetic sequences (see AAW79101-CC 03) encoding fatty acid epoxygenases (see AAW79742-44), especially delta-CC 12-epoxygenases or mixed function monooxygenases. These provide the means by which fatty acid metabolism can be manipulated in e.g. yeast, mould, CC bacteria, insects, birds, mammals and plants (especially oilseed plants CC such as flax), in particular to convert unsaturated fatty acids to CC epoxygenated fatty acids. The invention extends to genetically modified coil-accumulating organisms and to the oils derived from them. These oils can be used in production of coatings, resins, glues, plastics,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This cDNA clone, designated Crepx, codes for a novel epoxygenase (see CC AAW79743) of a Crepis sp. (not Crepis palaestina) that has a high CC vernolic acid content. The Crepx gene shows a high degree of homology to the novel Cpal2 delta-12-epoxygenase gene (see AAW3101) of C. CC palaestina. Crepx cDNA was isolated from a Crepis sp. cDNA library using CC a Crepis alpina acetylenase partial gene sequence (see AAV63104) as probe. The invention relates generally to novel genetic sequences (see CC AAV63101-03) encoding fatty acid epoxygenases (see AAW79742-44), CC especially delta-12-epoxygenases or mixed function monooxygenases. These CC provide the means by which fatty acid metabolism can be manipulated in CC e.g. yeast, mould, bacteria, insecte, birds, mammals and plants CC (especially oilseed plants such as flax), in particular to convert CC unsaturated fatty acids to epoxygenated fatty acids. The invention cexends to genetically modified oil-accumulating organisms and to the CC oils derived from them. These oils can be used in production of coatings, CX resins, glues, plastics, surfactants or lubricants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes Vernonia galamenensis fatty acid epoxidising enzyme. The present invention also describes: (i) Vernonia galamenensis fatty acid desaturase; (ii) chimeric genes comprising the fragments linked to regulatory sequences; and (iii) transformed host cells containing the chimeric genes. The DNA's from the present invention can be used to alter levels of expression of the enzymes in transformed host cells or to produce the recombinant enzymes by transformation of microbial host cells. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding Vernonia galamenensis fatty acid desaturase and fatty epoxidising enzyme - used to alter levels of expression of the enzy transformed host cells or to produce recombinant enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1999-059065/05.

CC The invention relates to an isolated nucleic acid fragment encoding or CC comprising a sequence encoding a plant enzyme that is a delta-12 (desaturase, delta-12 hydroxylase, or delta-12 fatty acid hydroxylase. CC Chimeric genes comprising nucleic acids of the invention are used to create transgenic plants with altered levels of unsaturated fatty acids, CC and can modify plant lipid composition. Nucleic acids of the invention CC can be used as hybridisation probes to isolate or amplify nucleotide composition entered levels of letty acid desaturase. They can also be used in restriction fragment length CC polymorphism (RFUP) breeding to obtain altered levels of oleic acids in ced oil of oil producing plant species. They can also be used to produce composition can combine the high oleate trait of transformed cc seed oil containing altered levels of unsaturated fatty acids. Nucleic cacids of the invention can combine the high oleate trait of transformed cc seeds with mutations for altered fatty acid compositions to obtain new fatty acid compositions and/or improved agronomy. A vegetable oil low in cotal saturates and high in monounsaturates would provide significant health benefits to consumers (reduced risk of coronary heart disease) as well as economic benefits to oil processors. The current sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Comparison of the sequences of the gene (AAQ66074) and the cDNA (AAQ66068) revealed the presence of a single intron of 1134 bp at a posn. between nucleotides 88 and 89 or the cDNA, which is 4 nucleotides 5 to the initiation codon. The cDNA is contained in clone AAP22103. Plasmid AAP22103 was deposited on October 16, 1992 with the ATCC and bears accession number ATCC 69095. An isolated nucleic acid fragment where in the nucleic acid identity is 90% or greater to AAQ66080 or AAQ66074 is claimed. (Updated on 25-MAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               붕
desaturase. Substitution of N-terminal OLE1 protein coding sequences with the N-terminal sequence derived from the Arabidopsis FAD2 gene is done to optimise gene expression, membrane targeting and ER (endoplasmic reticulum) retention of the chimeric enzyme. Modified yeast delta-9 desaturase pl-ole1 gene comprising a desaturase domain and a cyt b5 domain, is customised for expression in a plant cytoplasm. This gene is modified for expression in Arabidopsis and related species to obtain transgenic plants that produce a higher yield of unsaturated fatty acids. Transgenic plants, especially oil plants, are produced we because the content of the co
